

ABSTRACT of type (b) Industrial Applications

TitleName SURNAME^{1*}, Name SURNAME²¹Affiliation, Country²Affiliation, Country

*e-mail address of corresponding author

This template provides authors with most of the formatting specifications needed for preparing electronic versions of their abstracts. Abstracts should be one (1) page long and must include at least one illustrative figure outlining the quality of the results. The quality of the abstracts will be assessed using averaged ratings for three equally important criteria. For industrial applications the criteria are **(1) novelty, (2) usability, and (3) competitiveness**. Details about the criteria applied in evaluating the submissions can be found in the new guide for authors and reviewers.

Please be sure that you discuss about these three items:

- **Novelty:** *Is it a novel application? Does this work lead to new knowledge in the field of the application? Is it the first time the industry has tried applying the SPH technique to this problem?*

- **Usability:** *Is it feasible/accessible for a non-specialist SPH engineer/modeller? Is SPH easy to use on this application compared to the modelling state-of-the-art? What is the time required to define the numerical setup (including pre and post-processing) compared to the state-of-the-art? Is the formulation/technique numerically robust and free of tuning parameters?*

- **Competitiveness:** *How does it compare with standard industrial modelling software tools? Does SPH provide a solution for this application that can not be obtained by traditional methods? What is the level of accuracy compared with results obtained with the state of the art in CFD? How does computational time, resources and power consumption (green computing) compare to classical schemes?*

Figure 1: Example of a figure caption

The template will number citations consecutively within brackets [?]. The sentence punctuation follows the bracket [?]. Refer simply to the reference number, as in [?], do not use “Ref. [?]” or “reference [?]” except at the beginning of a sentence: “Reference [?] was the first . . .”
